

## Erratum

### Erratum to 'Neuronal nicotinic receptor agonists: a multi-approach development of the pharmacophore'

[J. Comput. Aid. Mol. Des., Vol. 15 (2001) 859]

O. Nicolotti<sup>a</sup>, M. Pellegrini-Calace<sup>a</sup>, A. Carrieri<sup>a</sup>, C. Altomare<sup>a</sup>, N.B. Centeno<sup>b</sup>, F. Sanz<sup>b</sup> & A. Carotti<sup>a,\*</sup>

<sup>a</sup>Dipartimento Farmaco-chimico, Università di Bari, Via Orabona, 4, 70125 Bari, Italy; <sup>b</sup>Research Group on Biomedical Informatics, Institut Municipal d'Investigació Mèdica, Universitat Pompeu Fabra, Carrer Dr. Aiguader 80, E-08003 Barcelona, Spain

The authors regret that the Catalyst/Hiphop outcome has been erroneously reported, though this does not involve any change in the discussion of results and conclusions. On p. 867 Figure 5 is incorrect, the correct figure is given below:

Figure 5. Superimposition of **8** (coloured in cyan, on the left) and of **18** (coloured in green, on the right) onto **13** (coloured in red). The grid-sphere contours, coloured in red, blue and green, indicate ionic, hydrophobic and hydrogen bond interaction areas respectively. The arrows show the HB directionality.

On p. 869 Table 6 is incorrect, the correct table is given below:

Table 1. Catalyst/HipHop parameters used for the hypothesis generation.

Cmps	Principal <sup>a</sup>	MaxOmitFeat <sup>a</sup>	Cnfs <sup>a</sup>	Features/Cnfs <sup>a</sup>
<b>13</b>	2	0	8	4.00
<b>14</b>	1	1	6	6.00
<b>15</b>	1	1	94	3.84
<b>8</b>	1	1	4	6.00
<b>7</b>	1	1	11	4.00
<b>17</b>	1	1	12	5.58
<b>10</b>	1	1	10	5.40
<b>19</b>	1	1	40	6.72

<sup>a</sup>Principal, MaxOmitFeat and Features/Cnfs values define the weight of compounds when an hypothesis is generated, the number of features that can be missed and the total number of features divided by the number of conformers respectively (see text).
